Night Navigator 8540 installed on Speedrunner II, Aegean Speed Lines' most recent addition

July 27, 2007

Vancouver, B.C. - Current Corporation has confirmed the installation of the Night Navigator 8540 camera system onboard the Speedrunner II, through their Greek distributor, Marel Electronics S.A. The Speedrunner II is the latest addition to the Aegean Speed Lines fast ferry fleet.

The Night Navigator 8540 is a robust all weather system incorporating a gated image intensified camera and a high speed lens to gather infrared light. The infrared searchlight can be used to illuminate up to 2000 meters ahead of the vessel, providing invaluable assistance in obstacle detection and collision prevention.

The Night Navigator will prove beneficial for the ship's safe operation at night, while underway during darkness. The system will allow the crew to visualize potential obstructions and emerging rocks that are imbedded throughout the Aegean and Mediterranean waters and chartered routes.

The Night Navigator 8540, approved for the HSC code: holding DNV, RINA and U.S. Coastguard certification, will set precedence, improving the safety and the security of the passengers and crew.

The high speed vessel, which started its scheduled itineraries earlier this month, will provide a fast alternative to the existing ferry routes. As tourism continues to grow on many of the Greek islands the Speedrunner II will facilitate not only transportation for the tourists from the country's major airports to holiday destinations, but also provide a vital link for local inhabitants who work and live on the islands.

-End

Current Corporation is a night vision camera manufacturer, providing cooled, un-cooled thermal, image intensified night vision and long range day camera systems to combine the best vision in all weather situations. For safe navigation, crew security or anti-piracy applications, Current Corporation proposes global solutions, combining night vision technology and deterrent devices like the LRAD (Long Range Acoustic Device). Current Corporation's systems are successfully installed on motor yachts, high speed ferries, and coastal surveillance and Search & Rescue vessels worldwide.
